Dear Solen Software Group hiring team,

Your mandate calls for a technology leader who can turn a software portfolio into AI-native businesses while improving engineering execution, standards, and reusable platform capability. That is closely aligned with my recent work: I founded Intelligent DataWorks, built the AssistX Generative AI platform from zero to production, and led an 11-engineer team delivering 70+ AI automations across 20+ HR and business workflows.

I also bring the portfolio and executive-facing pattern behind that build. At AWS, I advised more than 200 enterprise customers on AI/ML, big data, and cloud architecture while training 180+ solution architects through internal AI and analytics communities. At NorthBay, TriMark, MassMutual, and SuccessKPI, I established new AI, data, governance, and SaaS capabilities, coached teams, set technical standards, and moved systems from concept to production under real business constraints.

Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about how my hands-on AI platform background, engineering leadership, and portfolio-modernization experience can help Solen accelerate AI adoption across its businesses.

Sincerely,
Keith Steward
