Sundayy Hiring Team

Re: AI/ML Engineer

Dear Sundayy Hiring Team,

Designing secure, enterprise-scale AI applications for regulated healthcare closely matches my hands-on architecture and platform work.

At Intelligent DataWorks, I built the AssistX core and first 80% of its initial application using Python, FastAPI, LLMs, agents, MCP, RAG, PostgreSQL/PGVector, APIs, AWS, Docker, and CDK. I recruited and technically led 11 engineers while owning delivery, security, quality, and production operations.

The platform supports 70+ automations across more than 20 workflows and uses evaluation, guardrails, human oversight, observability, model routing, cost controls, releases, and incident practices. Earlier, I directed cloud software for an FDA-cleared healthcare product and led privacy and AI-governance engineering in regulated environments.

My strongest cloud depth is AWS with direct GCP Vertex AI exposure rather than Azure, and I have observability depth rather than specific Arize/Phoenix ownership. I would welcome a discussion about building scalable AI applications that meet healthcare compliance, reliability, and adoption requirements.

Sincerely,

Keith Steward, Ph.D.
