TalentHop Hiring Team

Re: Senior Engineering Manager - Enablement

Dear TalentHop Hiring Team,

Improving developer feedback loops through CI/CD, testing, internal platforms, measurement, and AI-assisted engineering closely matches how I have built teams and production systems.

At Intelligent DataWorks, I built the AssistX core and first 80% of its initial application, then recruited and technically led 11 engineers. I owned CI/CD, automated testing, code reviews, cloud deployments, security, observability, incidents, and operations. More than half of the platform was developed with code-generation tools, and I mentored engineers in effective Codex use.

The platform reached production in eight months and supports 70+ automations across more than 20 workflows with 99.9% availability. At AWS, I developed technical standards and enablement for global specialist communities totaling 180+ professionals. Across roles, I have used delivery, quality, cycle-time, adoption, and business-value metrics to guide change.

My experience spans broad engineering enablement rather than a career exclusively inside a formal Developer Experience organization, and OpenTelemetry itself is not documented. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about making AI-enabled software delivery faster, safer, and measurably more effective.

Sincerely,

Keith Steward, Ph.D.
