USA Tech Recruit Hiring Team

Re: Chief Technology Officer

Dear USA Tech Recruit Hiring Team,

Turning an early AI and robotics platform into a dependable product while building the engineering organization closely matches my work as a hands-on founder, architect, and engineering executive.

At Intelligent DataWorks, I set technical and product direction, architected the reusable AssistX platform, and built its core plus the first 80% of its initial application hands-on. I then recruited and technically led 11 engineers while owning a \$900,000 budget, architecture, releases, security, AWS operations, and customer validation. The platform supports 70+ automations across more than 20 workflows, has been tested with 150+ early users, and operates with 99.9% availability.

My broader record spans backend services, cloud infrastructure, distributed data, applied AI, and commercial product delivery. At AWS, I advised 200+ enterprises and developed specialist communities totaling 180+ people. Earlier, I led a 25-person software organization and directed the cloud platform behind an FDA-cleared connected product.

I am most effective where architecture, hiring, product judgment, and direct technical investigation must remain tightly connected. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about building the engineering foundation for repeatable, enterprise-ready delivery.

Sincerely,

Keith Steward, Ph.D.
