Vericence Hiring Team

Re: AI-Native Delivery Lead & Agentic AI Engineering Lead

Dear Vericence Hiring Team,

Establishing an AI-native delivery practice that moves agentic systems from discovery through governed production closely matches my combination of hands-on architecture, platform delivery, and enterprise enablement.

At Intelligent DataWorks, I architected and helped build a production platform using LLMs, RAG, agents, vector search, MCP, LangChain, LangGraph, APIs, and AWS. I recruited and technically led 11 engineers while remaining hands-on. We shipped the first commercial release within eight months; it supports 70+ automations across more than 20 workflows and accelerates selected work by up to 50x. I also built and deployed an AWS Bedrock AgentCore customer-service agent using CDK.

My governance and enterprise-delivery experience is direct. At MassMutual, I led cloud implementation across five privacy and AI-governance initiatives, including evaluation, transparency, bias, drift, IAM, monitoring, auditability, and human oversight. At AWS, I advised 200+ enterprises on AI, machine learning, distributed data, and cloud architecture while developing technical communities totaling 180+ specialists.

My cloud depth is AWS-centered rather than OCI-specific; the posting treats OCI as preferred, and the underlying patterns across identity, containers, APIs, data platforms, security, and operations transfer directly. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about building reliable agentic delivery patterns for the AIDP Lakehouse.

Sincerely,

Keith Steward, Ph.D.
