XRHealth Hiring Team

Re: VP of AI & Automation

Dear XRHealth Hiring Team,

Redesigning internal operations with AI, automation, measurable ROI, and healthcare-grade governance closely matches the work I have done building practical AI systems and operating controls.

At Intelligent DataWorks, I defined the AI strategy and architecture, recruited and technically led 11 engineers, and remained hands-on with Python, SQL, LLM APIs, RAG, agents, vector search, workflow orchestration, evaluation, observability, prompt-injection screening, and AWS. The platform shipped within eight months, supports 70+ automations across more than 20 workflows, and accelerates selected work by up to 50x.

My regulated-technology experience is directly relevant to AI use around sensitive data. At MassMutual, I led implementation across privacy and AI-governance initiatives, including model transparency, bias, drift, monitoring, auditability, and human oversight. Earlier, I led an FDA-cleared digital-health product and HIPAA-informed cloud platform, and my life-sciences background includes pharmaceutical and bioinformatics software.

I have not owned provider-side revenue-cycle operations or every tool in your listed stack, so I would bring transferable healthcare, governance, data-platform, CRM, finance/operations, and automation depth. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about making XRHealth's AI transformation measurable, adopted, and audit-ready.

Sincerely,

Keith Steward, Ph.D.
