XRHealth Hiring Team

Re: VP of AI

Dear XRHealth Hiring Team,

Turning healthcare operations into secure, high-value agentic workflows while establishing the team, governance, and adoption model closely matches my combination of AI leadership and hands-on platform delivery.

At Intelligent DataWorks, I personally built the core and first 80% of AssistX, then recruited and led 11 engineers across AI, application, data, testing, DevOps, and cloud work. The platform supports 70+ automations across more than 20 workflows, accelerates selected work by up to 50x, and sustains 99.9% availability.

I established evaluation, guardrails, human review, observability, security, model routing, cost controls, release practices, vendor decisions, and executive demonstrations. My earlier healthcare-technology experience includes leading cloud software for an FDA-cleared dental scanning product with HIPAA-related controls, alongside a Ph.D. and commercial life-sciences software background.

Intelligent DataWorks completed its planned operating transition in October 2026. Revenue-cycle and payer workflows would be a domain bridge, but the underlying mandate—finding high-value processes, building governed AI systems, proving ROI, and driving adoption—is work I have repeatedly delivered. I would welcome a discussion about the first transformation priorities for this role.

Sincerely,

Keith Steward, Ph.D.
