asobbi Hiring Team

Re: Senior Engineering Manager (Neocloud Infrastructure)

Dear asobbi Hiring Team,

Scaling a cloud platform while strengthening reliability, automation, and engineering leadership closely matches how I have combined hands-on infrastructure work with team development.

At Intelligent DataWorks, I built and operate the AWS foundation for a production AI platform while technically leading 11 engineers. The platform uses Python, FastAPI, PostgreSQL, Docker, APIs, AWS CDK, CI/CD, security controls, and observability; it supports 70+ automations across more than 20 workflows with 99.9% availability. I remain directly involved in architecture, deployments, troubleshooting, releases, and production operations.

At MassMutual, I partnered with Site Reliability Engineering and Enterprise Architecture to establish secure serverless, container, CI/CD, and infrastructure-as-code patterns. At AWS, I advised 200+ enterprises and developed global specialist communities totaling 180+ people. Earlier, I built a fault-tolerant AWS/Cassandra platform for an FDA-cleared connected product.

My automation background is strongest in AWS CDK and CloudFormation rather than Terraform or Ansible, and I would ramp quickly on those tools. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about improving platform reliability while developing the engineering team.

Sincerely,

Keith Steward, Ph.D.
