iFIT Hiring Team

Re: Director, Enterprise AI Enablement

Dear iFIT Hiring Team,

Building enterprise AI governance, practitioner communities, and hands-on agentic automation across business functions closely matches the enablement work I have led.

At Intelligent DataWorks, I built the AssistX core and first 80% of its initial application and lead a platform supporting 70+ automations across more than 20 workflows. It combines agents, RAG, MCP, enterprise data, evaluation, guardrails, human review, observability, and 99.9% availability.

At AWS, I built global AI/ML and data communities totaling 180+ professionals and created more than 170 enablement assets. At MassMutual, I led architecture across five privacy and AI-governance initiatives involving transparency, bias, drift, monitoring, human oversight, and auditability.

My consumer-fitness and SAP/Workday depth is limited, but the governance, agentic engineering, workflow redesign, training, adoption, and measurement mandate is direct. I would welcome a discussion about helping iFIT establish a self-sustaining enterprise AI capability. I would bring disciplined execution, transparent metrics, and practical technical judgment from day one.

Sincerely,

Keith Steward, Ph.D.
