

Dear Hiring Team,

I am excited to apply for the VP of Data and AI role. My background aligns closely with your need for an executive who can turn AI strategy into production systems, measurable business impact, and durable team capability.

I currently lead Intelligent DataWorks, where I built an AI SaaS platform using LLMs, agents, RAG, workflow orchestration, and AWS. I also led AI/ML and data architecture work at AWS, MassMutual, SuccessKPI, TriMark, and NorthBay, giving me the mix of technical depth, executive communication, governance, and team leadership needed for this role.

I would welcome the chance to discuss how I can help Lyra Health scale practical, responsible AI.

Sincerely,
Keith Steward
