Dear PadSplit Hiring Team,

I am excited to apply for the Vice President Data AI Strategy role. PadSplit needs a VP who can turn data, machine learning, and AI into practical business advantage while improving outcomes for members, hosts, and the company.

At Intelligent DataWorks, I lead an 11-engineer team building a production GenAI SaaS platform with RAG, AI agents, vector search, orchestration, and AWS cloud services. At AWS, I advised 200+ enterprise customers on AI, machine learning, big data, and scalable cloud architecture. At SuccessKPI, TriMark, and MassMutual, I delivered enterprise SaaS, data platforms, AI governance, and measurable automation outcomes.

I would bring PadSplit a practical AI executive who can set strategy, build teams, stay technically credible, and deliver production systems that create business value.

Sincerely,

Keith Steward
